

GAR WOOD SPEEDSTER

1934

In 1934, with the popularity of their new 16ft. runabouts, Gar Wood developed an experimental 16 footer with the cockpit aft and the forward cockpit decked over. The prototype was named the "Speedster" and the name stuck. Gar's brother Phil took this sporty new design as his own so he could fully test it out. Over the next few years, only a handful were made making this one of the rarest models in the market today.
